

ESKIES

HOW LONG WILL THE ICE LAST IN MY ESKY?

When North QLD Ice 7/8 tube ice is packed into an esky you have shut the air out. This is the secret to using a longer lasting ice making you the consumers keep coming back to buy.

When the ice is small (7/8 tube) like ours the warmer air can't penetrate into the ice and start breaking down the cooling effect that our ice provides.

When you buy ice for eskies you are looking for ice that lasts longer.

With North QLD Ice it is more users friendly and is easy to work with i.e., like making cocktail it does not destroy the blades and motors and you have a more consistence blend another important feature of our ice is the ice is all loose in each bag. The ice is manufactured and packaged in a special process that means you get no hard bags of ice all joined or stuck together. Gone are the days when you would have to smash the ice hard onto the ground just to be able to use it, it is now free of chunks.

North QLD Ice produces this superior ice in Townsville that way keeping cost down for you.

WE COOK OUR ICE

As strange as it may sound we do cook our ice at (minus)-22 (degrees) for at least 48 hours, which gives our ice the lowest possibly core temp before we deliver to you.

When we make the ice it comes out of the machines at -15. By the time we bag and palletize the ice it is at about -10 and becoming wet ice, this is the reason we cook our ice so we are ahead of our competitors in product as well as service!!!!

OUR ICE LASTS THREE TIMES LONGER

Our ice was independently tested by the Engineering Dept at JCU , they went to a store that sold both our ice and our competitors ice and as you see on TV our ice out lasted theirs 3 to 1 and that is a proven fact! The main reason for this is the cooking and the type of machinery we choose, all our ice is solid ice.

THE BIGGER BAG

Our ice comes in a 5 kg bag not 4kg, so both you and your customers receive a kilo of ice for free! A 100 bags means 100 kg of free ice.

SERVICE!!

We are always here when you need us and we don't run out of ice!!!!!!
